Feature flags and Al Configs > Al Configs

# **Manage AI Configs**

#### Overview

This topic explains how to view and manage Al Configs.

All of your Al Configs within a project appear on the **Al Configs** list. Creating a new Al Config adds it to the list and all environments within your project, and deleting an Al Config removes it from the list and all environments within your project.

To learn how to create a new Al Config, read Create Al Configs.

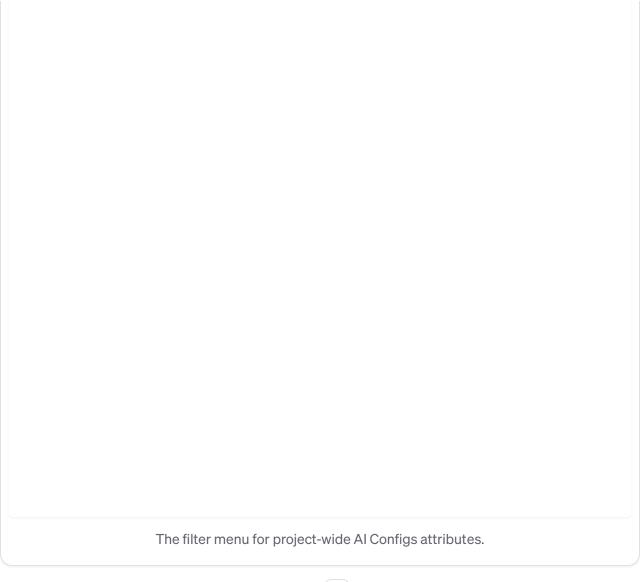

## **View Al Configs**

Use the search bar to find an Al Config by name, key, or description. By default, the most recently created Al Configs appear first.

#### Filter Al Configs

You can filter the list of Al Configs to view only those that share a particular, project-wide attribute. To filter your Al Configs, use the **Filters** menu at the top of the **Al Configs** list:

Within a project, you can filter by:

- Tags
- Maintainer
- Creation date

#### To filter your AI Configs:

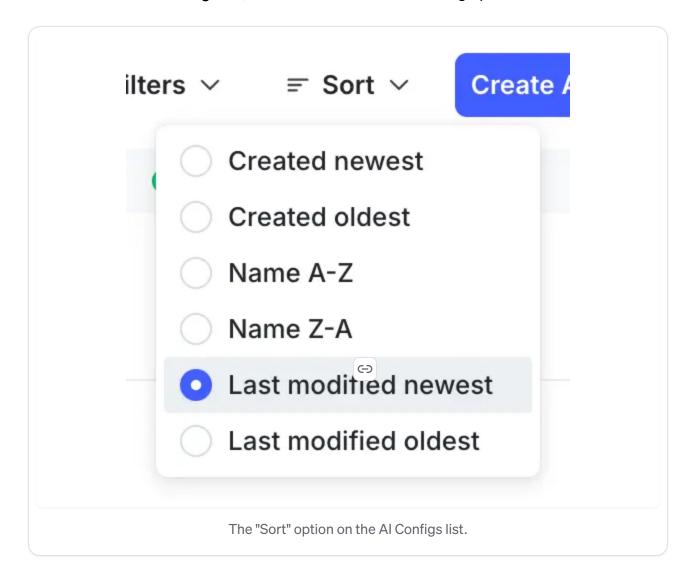

- 1. Click Filters.
- 2. Choose an attribute for a filtering option. The **Al Configs** list automatically updates.

#### Remove filters

To clear filters, click **Filters**, then click **Clear**.

### **Sort Al Configs**

You can sort the list of visible Al Configs by creation date, by name, or by last modified date. To sort the **Al Configs** list, click **Sort** and choose a sorting option:

## **Delete Al Configs**

You can delete an Al Config when you no longer need it.

to the Al Config from your application code before you delete it.

(i) Deleted AI Configs are gone forever

If you delete an Al Config, you cannot restore it. Be absolutely certain you do not need an Al Config anymore before you delete it.

#### To delete an Al Config:

- 1. Navigate to the detail page for the Al Config you want to delete.
- 2. In right sidebar, click the trash can icon to open the "Delete this Al Config?" dialog.
- 3. Click Delete Al Config.

The Al Config is deleted permanently.
